

Abstract

A computer program product being embodied on a computer readable medium and for facilitating medical diagnosis coding, the computer program product includes: data corresponding to the Tabular List of ICD9-CM being stored in at least a first table so as to preserve a hierarchy associated with the ICD9-CM; code for receiving user input for navigating through the Tabular List to a desired portion of the data corresponding to the Tabular List; and, code for displaying the desired portion of the data corresponding to the Tabular List with at least one other portion of the data indicative of the Tabular List so as to present the desired portion of the data in the hierarchy.
